

Become a Minnesota Tree Care Advisor Volunteer

This UMN-led program will give you the knowledge, skills, and training to help transform your interest in trees into positive community action.

During the Core Course, you will be trained in areas including basic tree biology and identification, best practices for planting and ongoing care, developmental pruning of young shade trees, and common tree diseases, pests, and defects. You will also learn about what it means to be an advocate for trees in your community and make a commitment to local volunteerism.

**The course meets weekly over Zoom
from March 25 - May 13 with an in-person
field day on the St. Paul Campus**
